4K Wi Fi

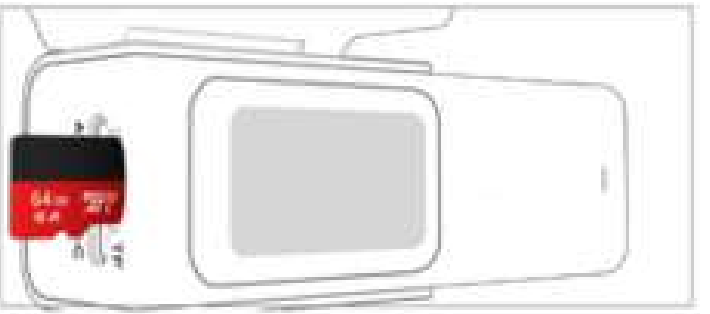
- Before using this product, please be sure to read this user manual carefully.

(Dual-lens)

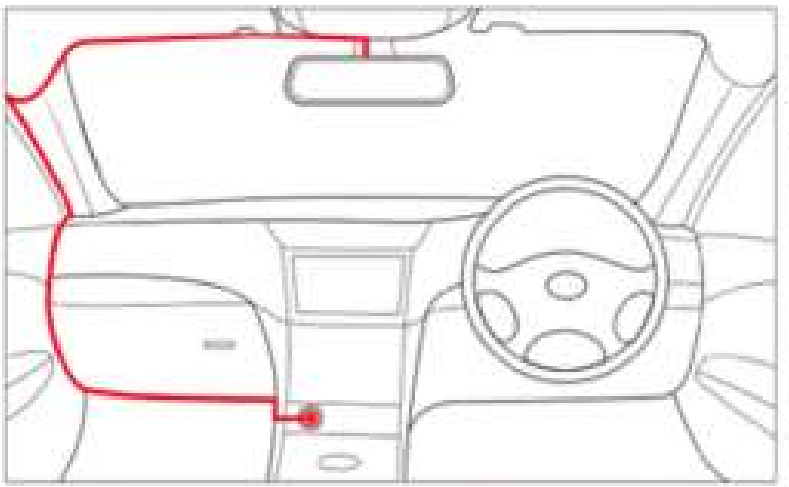
Installation Guide

TF Card Installation

Insert the TF card with the concave side facing down (as shown in the picture).



Dash Cam Wiring

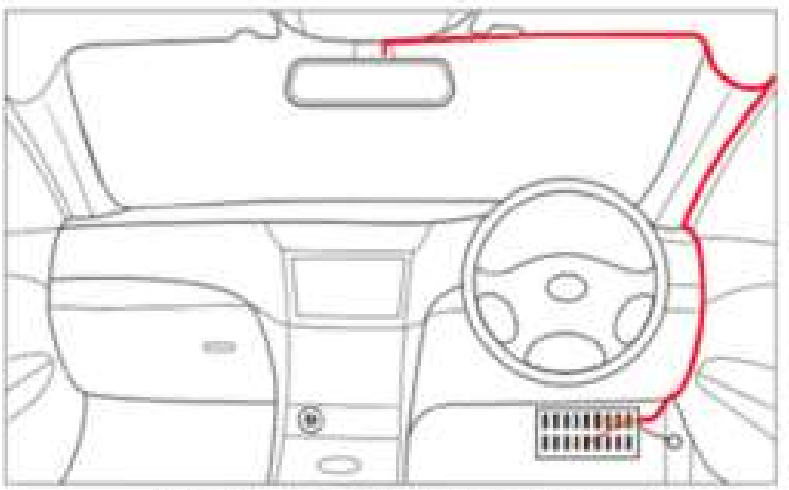


(Cigarette Lighter Installation Method)

Connect the power supply to the cigarette lighter and turn on the power.

The device should start normally. Conceal the power cable under the car' s headliner and runit along the A-pillar.

Depending on the vehicle, the cigarette lighter socket may be located in different places. The provided installation diagrams are for reference only.



(Buck Line Installation Method)

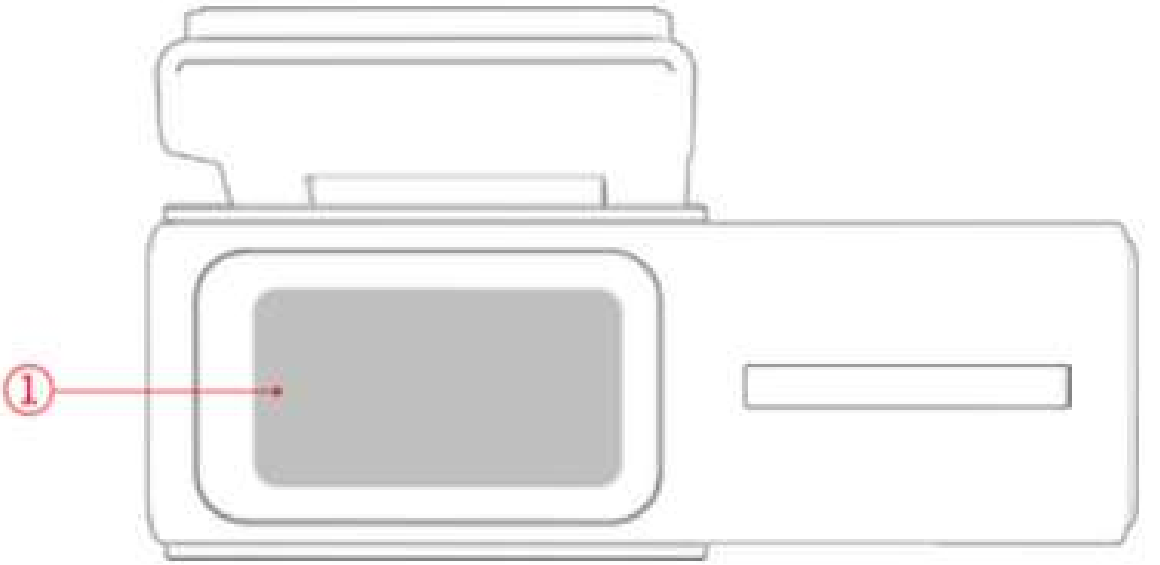
Plug the power cable into the dash cam.

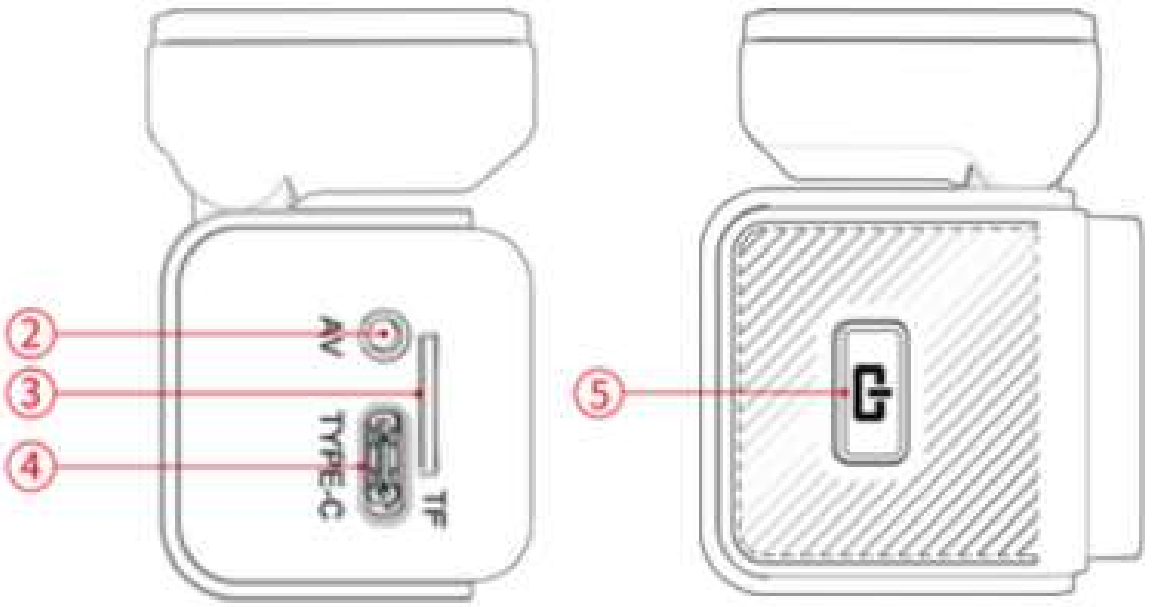
Route the cable around the driver' s side, concealing it under the headliner and along the A-pillar (as illustrated).

Then locate the car' s fuse box. Connect the black wire to the car' s ground, the yellow wire to the constant power, and the red wire to the ACC.

Depending on the vehicle, the fuse box may be located in different positions. The provided installationdiagrams are for reference only.

Product appearance description.





① Display Scree

② Rear Camera Port

③ TF Card Slot

④ Power Port

⑤ Power On / Power Off / Switch Display / Restore Factory Settings

Function One

- Long press the power button for 5-6 seconds to turn off; in the off state, press once to turn on.

Function Two

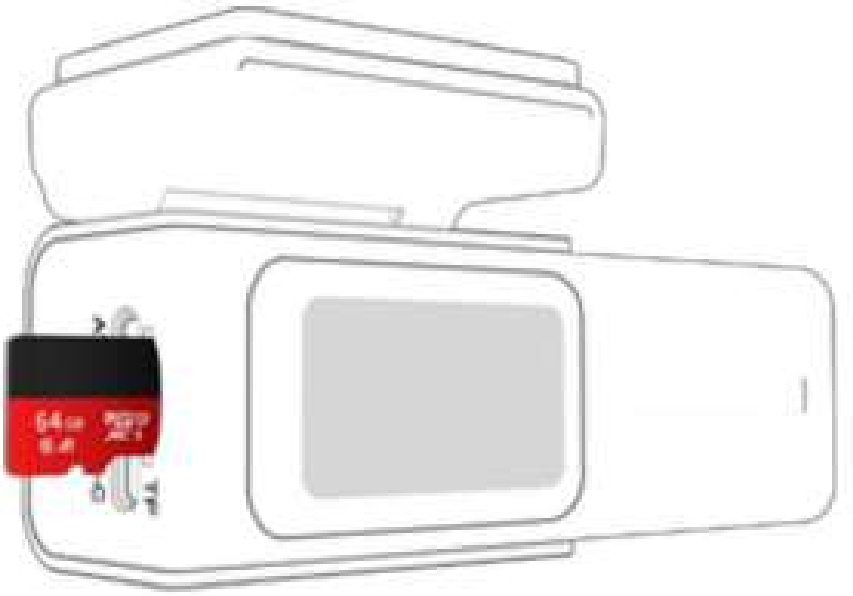
- Press the power button 5 times in quick succession within 2-3 seconds to trigger the factory reset.

Function Three

- In the on state, press the power button once to switch display pages

Storage Card Installation

Insert the TF card with the notched side facing down (as shown on the right, do not insert it upside down), supports up to 256GB.



Note: When inserting the storage card for the first time, the machine prompts "Please format the storage card." Press the "Power" button to format the storage card. You can also connect your phone to the recorder and format the storage card in the app.

WIFI Connectivity

WIFI Name: DVR-XXX WIFI Password: 12345678

Download the App

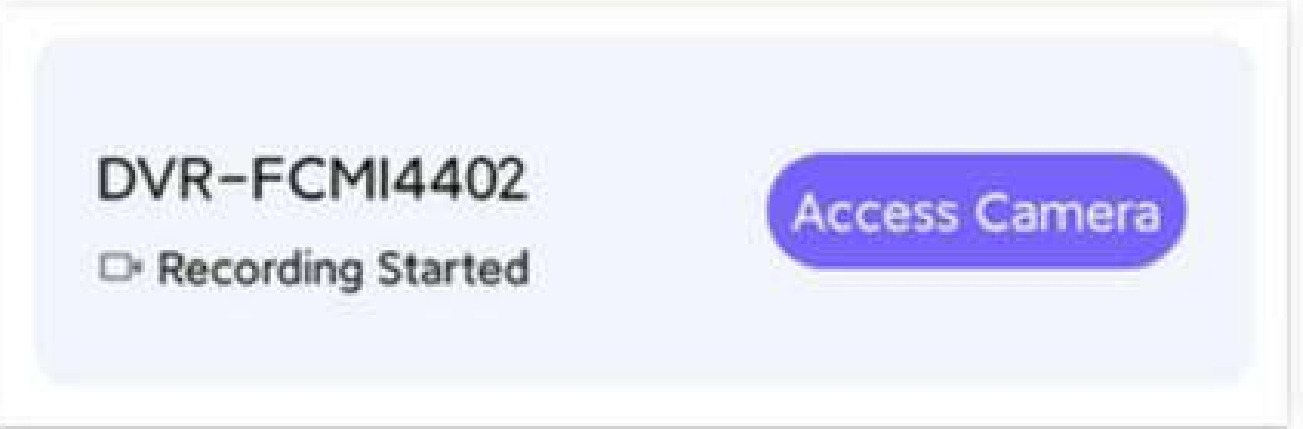
Search for the "**Viidure**" APP in the "Application Market/App Store" on your phone and download and install it.

Aurora Vehicles

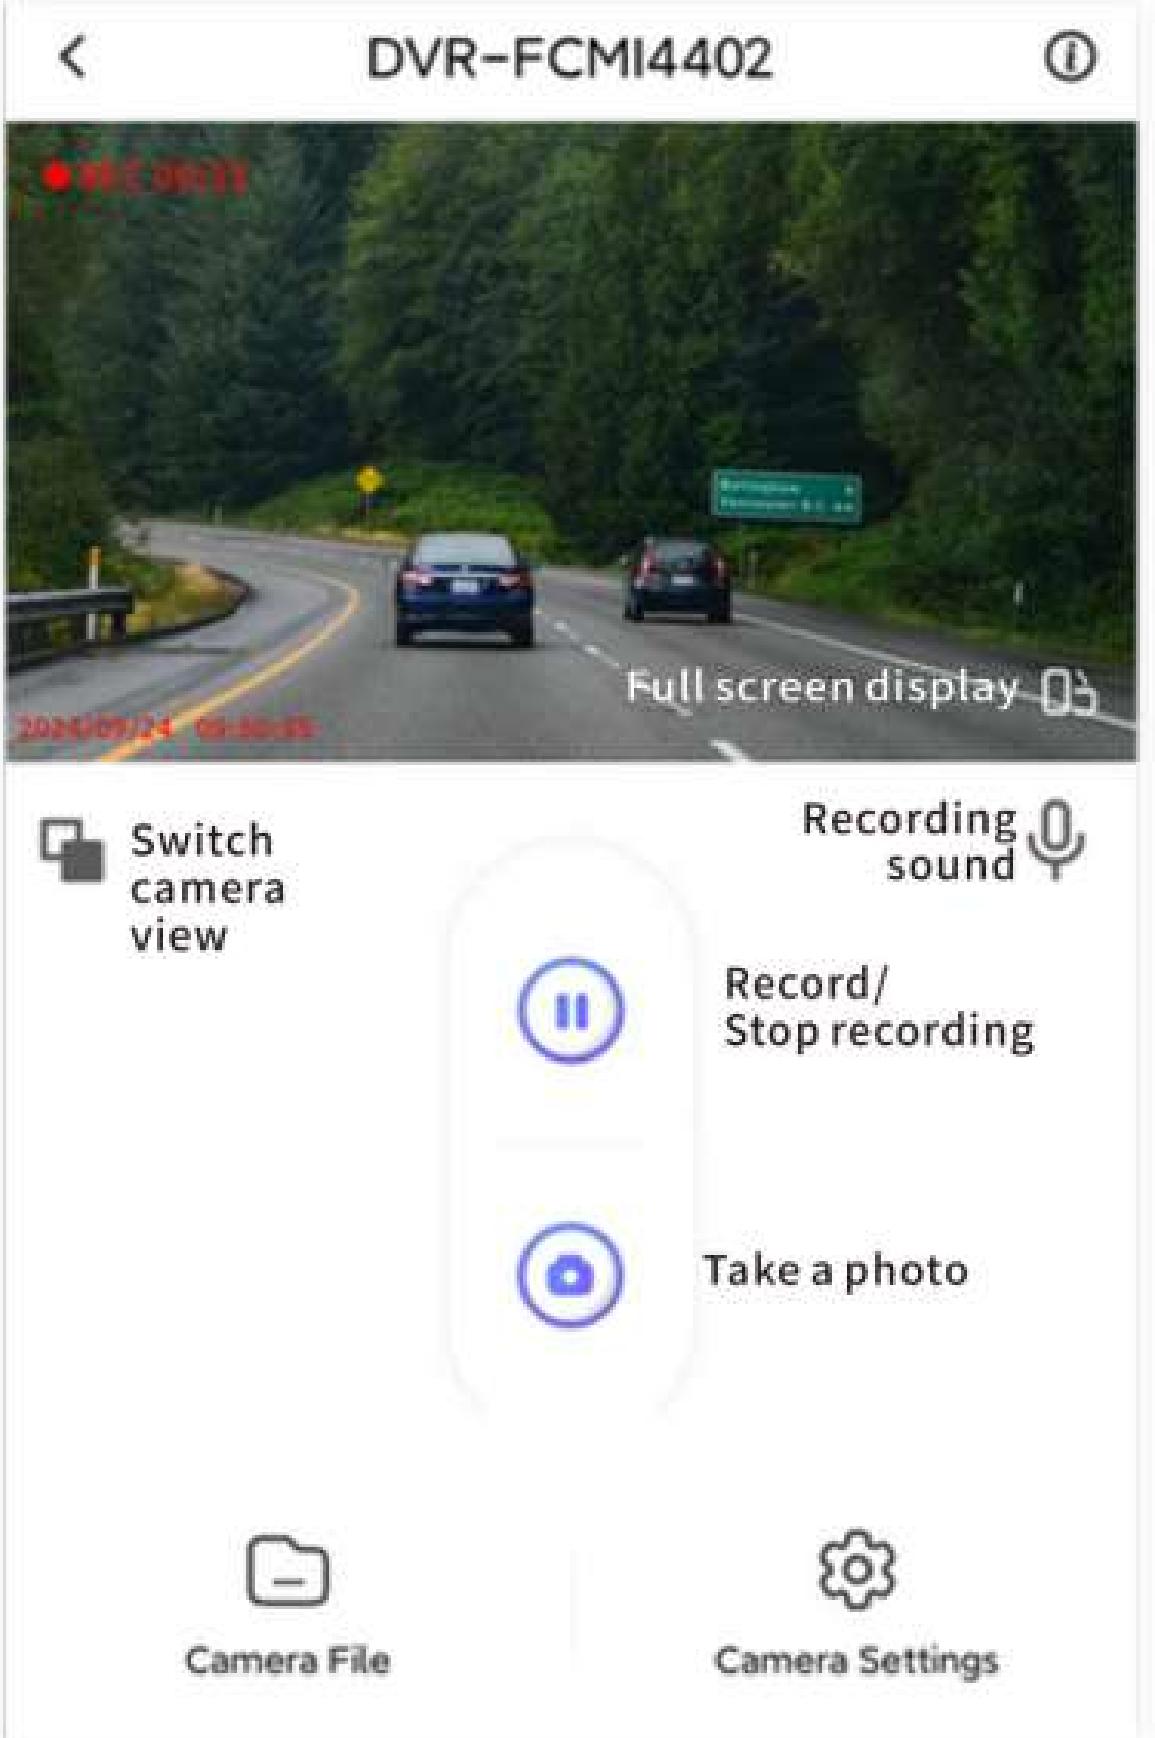
WIFI name :DVR-XXX WIFI password :12345678

How to connect?

After installation is complete, open the "Viidure App" and select to agree or allow permissions when prompted. Follow the instructions to connect to the hotspot named DVR-XXX (the device will automatically turn on the Wi-Fi hotspot when powered on; if you cannot find the DVR-named Wi-Fi, refresh your phone' s hotspot or restart the device). Enter the password: 12345678, and connect to Wi-Fi. [If prompted that the network is unavailable, select the "Always connect" option.] Click to return to the previous menu .



Click to connect to the recorder and enter the recorder interface.



Note: The interface may vary due to different versions.

Camera Flile

The dashcam records video files, and you can download and save the videos to your phone' s gallery without using mobile data.

Volume, recording, video recording, time watermark, monitoring, WIFI, format storage card, restore factory settings.

Video Resolution 4K+1080P >

Loop Recording Duration
The duration of each recording, if the memory card is full, it will automatically be overwritten from the earliest video
1 Minute >

Time Watermark

Advanced

Collision Sensing
When the camera is in recording mode, it will automatically lock current video when a impact is detected
Off >

Parking Mode (Hardwire Kit Required)

Frame Rate of Time-lapse Video
Choose the suitable frame rate to run the time-lapse recording function, 1FPS is the most memory-saving option
Off >

Step-down line

Cigarette lighter

The step-down line installation supports time-lapse recording function: The car cigarette lighter installation does not support time-lapse recording function.

When the vehicle is turned off, the dash cam activates the time-lapse recording function, capturing video at one frame per second to monitor the surrounding environment. This ensures that important evidence can be recorded in the event of a collision, damage, or theft, while using less storage and allowing for the recording of long video files.

FAQ

Q: What should I do if I encounter a "storage card full" or "insufficient storage space" message while recording video?
A: Connect your mobile phone to the dash cam, go to settings, and format the storage card, or manually clean up locked files.

Q: Why are the captured images blurry or why do I see star-like streaks?
A: The lens or car window may be dirty; please clean them carefully.

Q: What is the maximum supported TF card size?
A: This dash cam supports high-speed TF cards ranging from 16GB to 256GB. However, for 4K video, ensure you use a high-speed storage card that supports 4K recording to meet the write speed requirements. A minimum U1 grade is required; if the storage card indicates that the write speed is too slow, it is recommended to choose a reputable brand storage card with U3 grade write speed to ensure smooth video recording.

Q: Why does the device turn off immediately after powering on, or why does it not turn off after the car is turned off?
A: This may be due to improper installation of the wiring; please reinstall (especially the step-down line) and check the connections. It could also be due to insufficient power supply; consider replacing the power cable.

Q: The dash cam' s casing is very hot; how should I handle it?
A: This is normal; the device generates a lot of heat during operation, and the casing helps with heat dissipation.

Specifications

Name	Dash Cam
Screen	1.47 inches
Recording Specifications	4K+1080P
Lens Aperture	F1.8
Charging Device	Car Charger or Step-down Cable Output 5V⎓1.5A
Touch Control	Not Supported
Super Night Vision	Supported
Time-lapse Monitoring	Supported【Step-down Cable】
Parking Monitoring	Not Supported
Gravity Sensor	Supported
Simultaneous Recording	Supported
WIFI Connectivity	Supported
Real-time Storage	Supported
Loop Recording	Supported
Low Voltage Protection	Supported
Video Encoding	H.264
File Format	Photo (.JPG); Video (.ts)
Memory Card	Supports 16-256GB Memory Card
